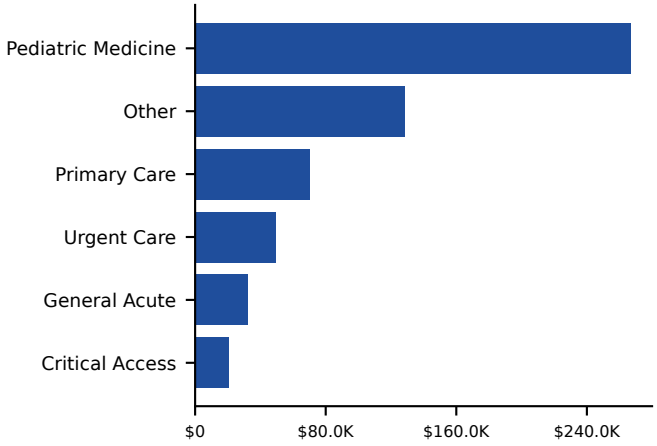
F3 Dollars by facility type



Talking points (templated from fact tokens; LLM off)

- Size: purchases of $592.8K across 5,470 doses rank this system 72 of 180 synthetic peers and equal 0.6% of benchmark dollars.
- Mix: Pneumococcal leads at 20.2% of dollars; the main facility type is Pediatric Medicine at 45.0%.
- Manufacturers: Pfizer holds 20.1% of dollars ($119.1K); the largest manufacturer is MERCK & COMPANY.
- Switching: no material switching between the two windows.
- White space: the MenB to MenACWY dose ratio is 3.38, an index of 511 against the benchmark, and 640 against in-state peers.
- Trend: trailing twelve-month dollars moved -21.4% against the prior twelve months; Influenza grew most and RSV fell most.
- Question to ask: what is driving purchasing in Pneumococcal, and which programs are planned for next season?
- Returns netted out of totals: $7,928 across 1 return rows.
